

**NEW FOR 2011!**

CREATING ENVIRONMENTS WHERE PEOPLE CAN SHINE™

# Clima-Tite™ Window-Wall Combination

Major Industries' unique Clima-Tite™ translucent panel systems, featuring pultruded fiberglass support members for enhanced thermal performance, are now available with an integrated operable or fixed composite window.

Clima-Tite™ Window-Wall systems allow you to provide light and ventilation control for building occupants plus superior thermal performance compared to traditional window or translucent wall systems.

By incorporating advanced composite operable windows plus high-performance hinges and locking hardware for long-term performance, we can provide a system that's unmatched in the industry. Numerous glazing options are available, including single, double and triple-glazed glass, low-E coatings, as well as optional features like multi-point casement locks and integral mini-blinds.

Clima-Tite™ translucent panels feature **Ultimate Series™ FRP face sheet** technology for unbeatable weathering performance, superior color retention and unmatched warranties. Clima-Tite™ systems also have a unique snap-to-lock installation feature that reduces the need for unsightly fasteners and provides a simple, clean and uncluttered look.

**Why choose a composite system?** Composites offer numerous advantages, including enhanced corrosion resistance, low thermal conductivity (eliminating the need for thermal breaks and improving performance), and low electrical conductivity. Composite systems also use less energy to produce than comparable aluminum designs.

More information on Clima-Tite™, including test data and system drawings, plus additional information on our full line of translucent systems, can be found at [www.majorskylights.com](http://www.majorskylights.com). Full details on the Clima-Tite™ Window-Wall system will be available soon.

## Clima-Tite™ Window-Wall Highlights

- Combines the light control of a translucent panel with the operability and thermal performance of a composite window
- Pultruded composite framing offers high strength and enhanced thermal performance
- Project-out, Casement and Fixed window options available
- Glass options available (low-E coatings, insulated glass)
- Window U-factors as low as .15 (fixed Triple IG glass)
- Translucent panels feature Ultimate Series™ FRP with industry-long warranties
